SAMEEN DHANIMISETTI

Computer Science Undergraduate · Software Engineering · AI Systems
| sameendhanimisetti@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science undergraduate with a strong foundation in Data Structures & Algorithms and hands-on experience building production software across backend, AI, and real-time systems. Built features spanning microservices, data pipelines, retrieval systems, databases, caching, and conversational AI, with a focus on performance, reliability, and practical problem-solving.

EDUCATION

Vellore Institute of Technology — B.Tech, Computer Science & Engineering | CGPA: 9.13/10.00 *2023 – 2027*

Karamveer College of Science & Commerce — Class XII | 93.3% *2022*

Indus World School — Class X | 91.6% *2020*

TECHNICAL SKILLS

Languages & Core	C++, Java, Python, JavaScript, Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Backend & Database	Node.js, Express.js, FastAPI, REST APIs, SQL, PostgreSQL, MongoDB, Redis
Generative AI / LLM	AI Agents, LangChain, LangGraph, CrewAI, n8n, Mem0, MCP, Prompt Engineering, pgvector / Vector Databases, Production RAG Systems
Voice AI	Pipecat, LLMs, Speech-to-Text, Text-to-Speech, Telephony, Real-Time Voice AI
Frontend / Cloud / Tools	React.js, Next.js, Tailwind CSS, AWS, Docker, Git, GitHub, Bitbucket

PROFESSIONAL EXPERIENCE

Software Developer Intern — Blostem Fintech Pvt. Ltd. | Noida — On-site *May 2026 – Aug 2026* *[Certificate]*

- Built and optimized a **LangChain-based RAG pipeline** for VoiceBrew, enabling knowledge retrieval during real-time Voice AI conversations.
- Built **data-ingestion microservices** using **Crawl4AI** for web crawling and **Docling** for PDF/document parsing, preparing extracted content for downstream processing.
- Worked with **pgvector** as the in-house vector database for production RAG systems, and added **Mem0-based conversation memory** so agents could retain user context across interactions.
- Delivered VoiceBrew features including **Click-to-Call, automated redial/retry, business-outcome matching, and Redis caching**, while redesigning the frontend with **Next.js and Tailwind CSS**.

Manual QA Intern — Here2Answer | Remote *Feb 2026 – Mar 2026* *[Certificate]*

- Owned **end-to-end QA** for client web products, designing and executing test cases across critical user workflows to catch functional and UI defects before release.
- Built and maintained **automated regression suites** with **Selenium and Playwright**, replacing manual repetitive checks and speeding up release-cycle testing.
- Tracked defects through resolution and partnered with developers to verify fixes, preventing regressions across future releases.

Full-Stack Developer Intern — amasQIS.ai | Remote — Qatar/Oman *May 2025 – Oct 2025* *[Certificate]*

- Built the frontend for a **green-hydrogen infrastructure monitoring platform**, turning sensor and environmental data into a responsive, easy-to-read interface.
- Developed interactive **geospatial visualization components** that let users explore environmental and sensor-based datasets in real time.
- Worked with backend **data-processing workflows** to ensure the frontend reliably reflected live application data at scale.

PROJECTS

FD Salahkar — AI-Powered Vernacular Financial Advisor *2026* | *[GitHub]*

Tech Stack: RAG, LangChain, Gemini API, Vector Database

- **Context:** Built a multilingual financial assistant to help users understand Fixed Deposits and make informed investment decisions.
- **Action:** Developed the knowledge-retrieval pipeline and implemented FD recommendations, maturity calculations, goal-based savings planning, and conversational assistance.
- **Result:** Secured **3rd Place at the Blostem AI Builder Hackathon among 650+ participating teams**.

VITB NEXIS — Full-Stack Blog Platform *2026* | *[GitHub]*

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, TF-IDF / Cosine Similarity

- **Context:** Built a full-stack blog platform for VITB students with public blog reading and an admin panel for content management.
- **Action:** Developed the React frontend and Node.js/Express/MongoDB backend with **JWT-based admin auth**, rich-text publishing, and a **TF-IDF / cosine-similarity recommendation engine** for related posts.
- **Result:** Delivered a working full-stack blog platform with authentication, content management, comments, and ML-based content recommendations.

ACHIEVEMENTS

- **3rd Place** — Blostem AI Builder Hackathon, among 650+ participating teams.
- **Winner** — Smart India Hackathon (Internal Round).
- **Finalist** — SanDisk Hackathon.
- **Winner** — College Debate Competition.
- **1st Prize** — University Public Speaking Competition.
